# Project Overview

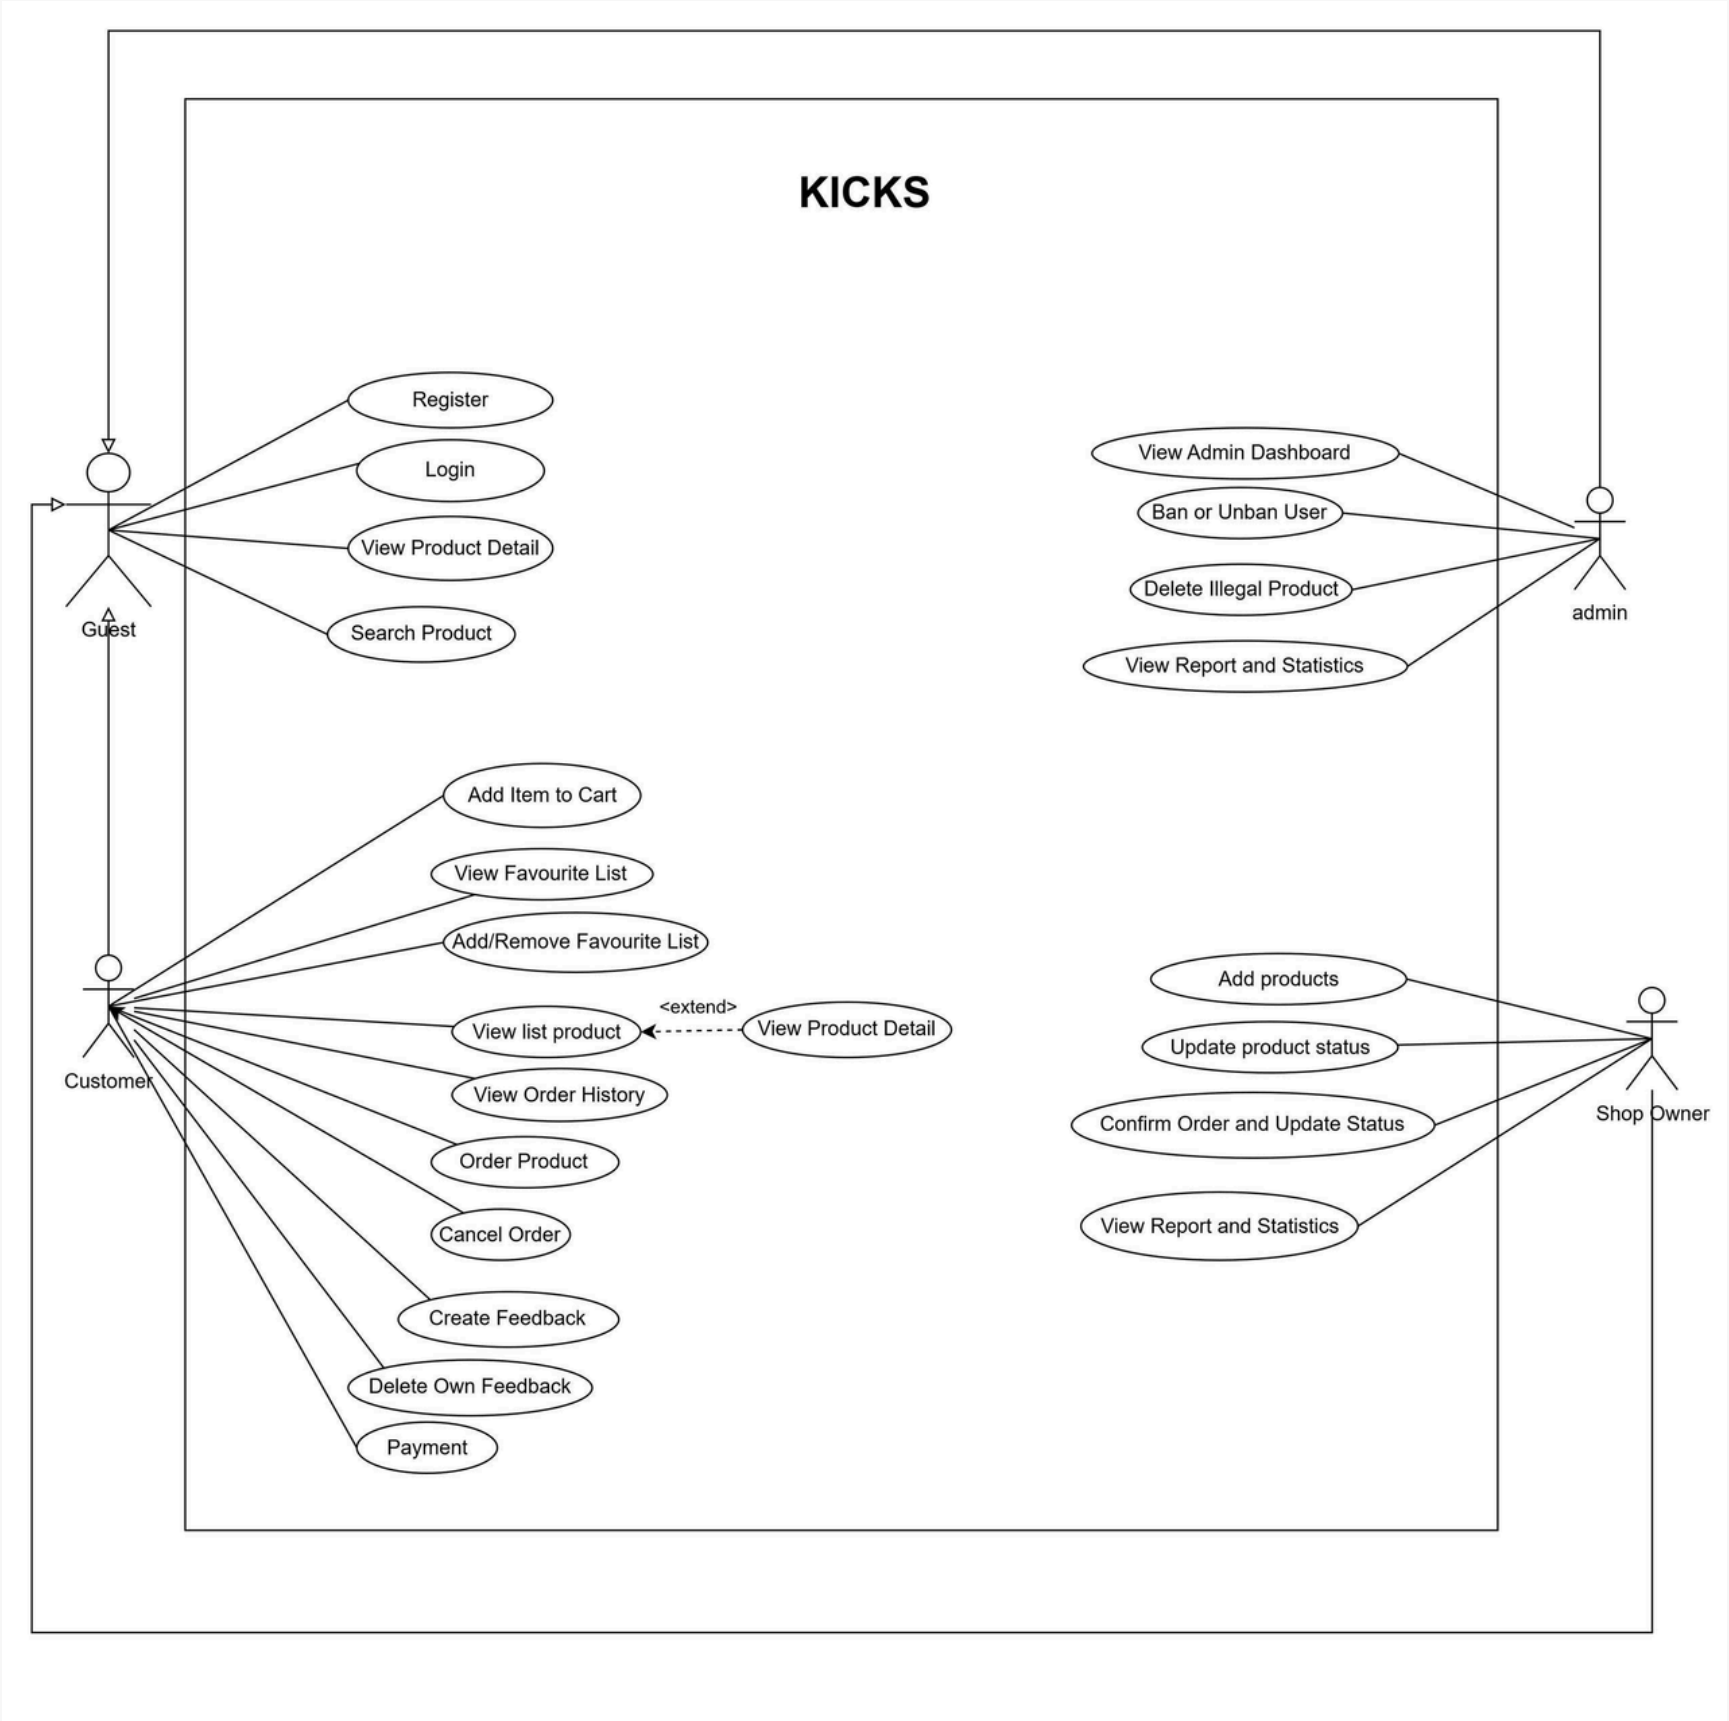

## Challenging the Legacy System:

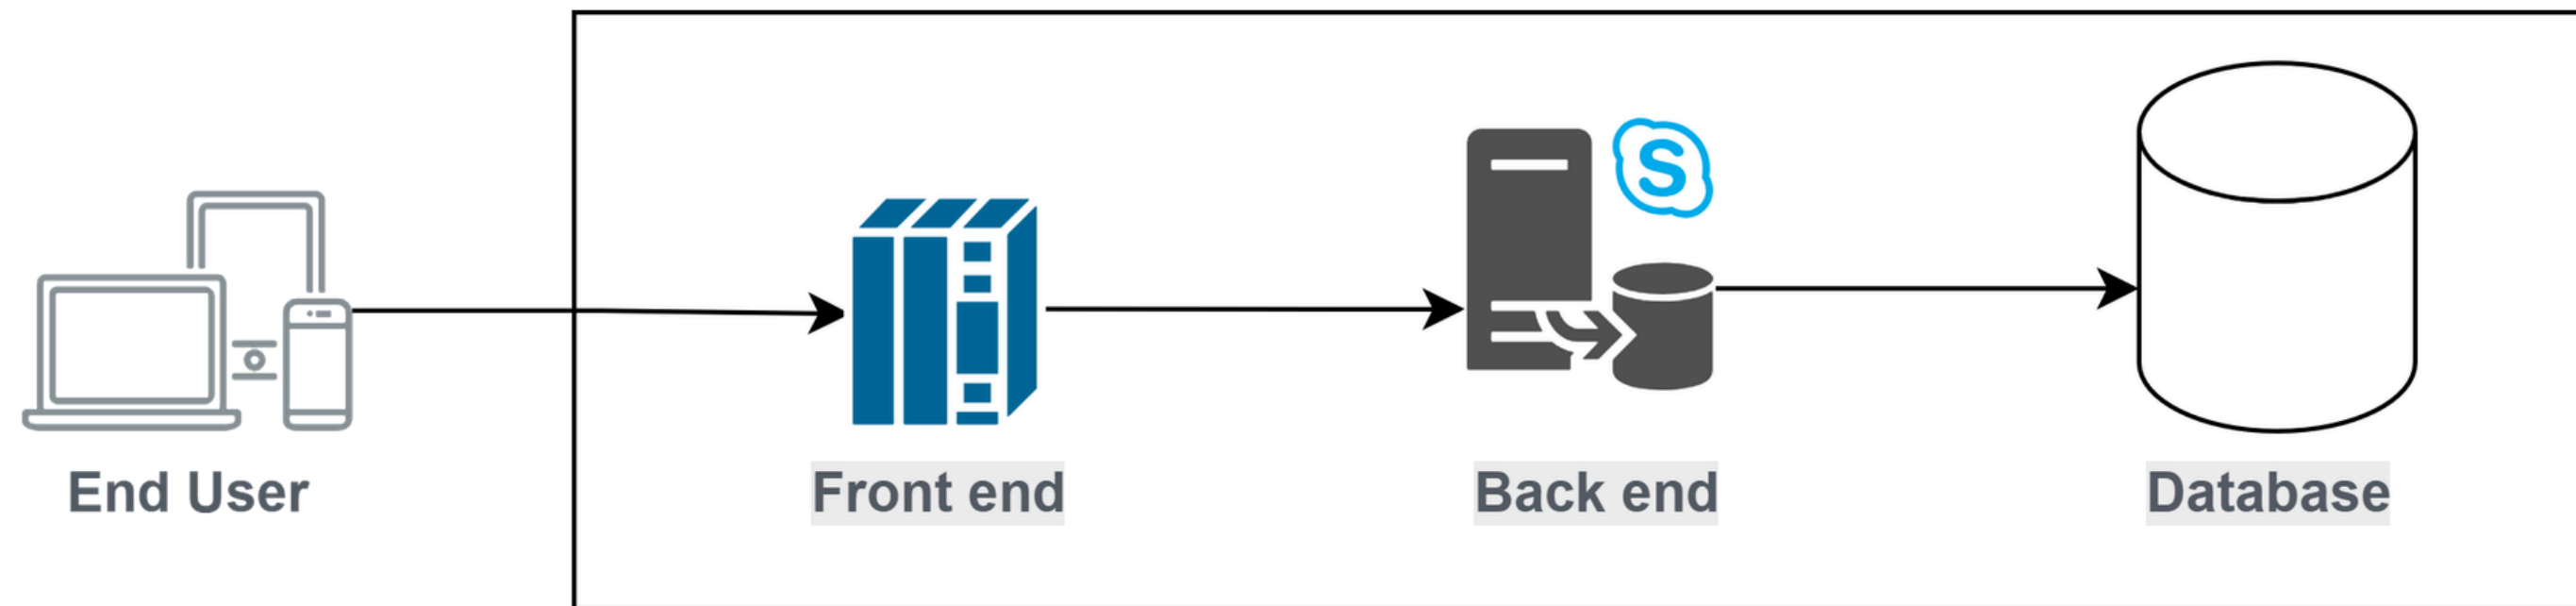

- **Scalability:** Frequent website crashes during Flash Sale events.
- **Performance:** Slow loading times for high-resolution product imagery.
- **Security:** High risk of data breaches and loss of sensitive customer information.

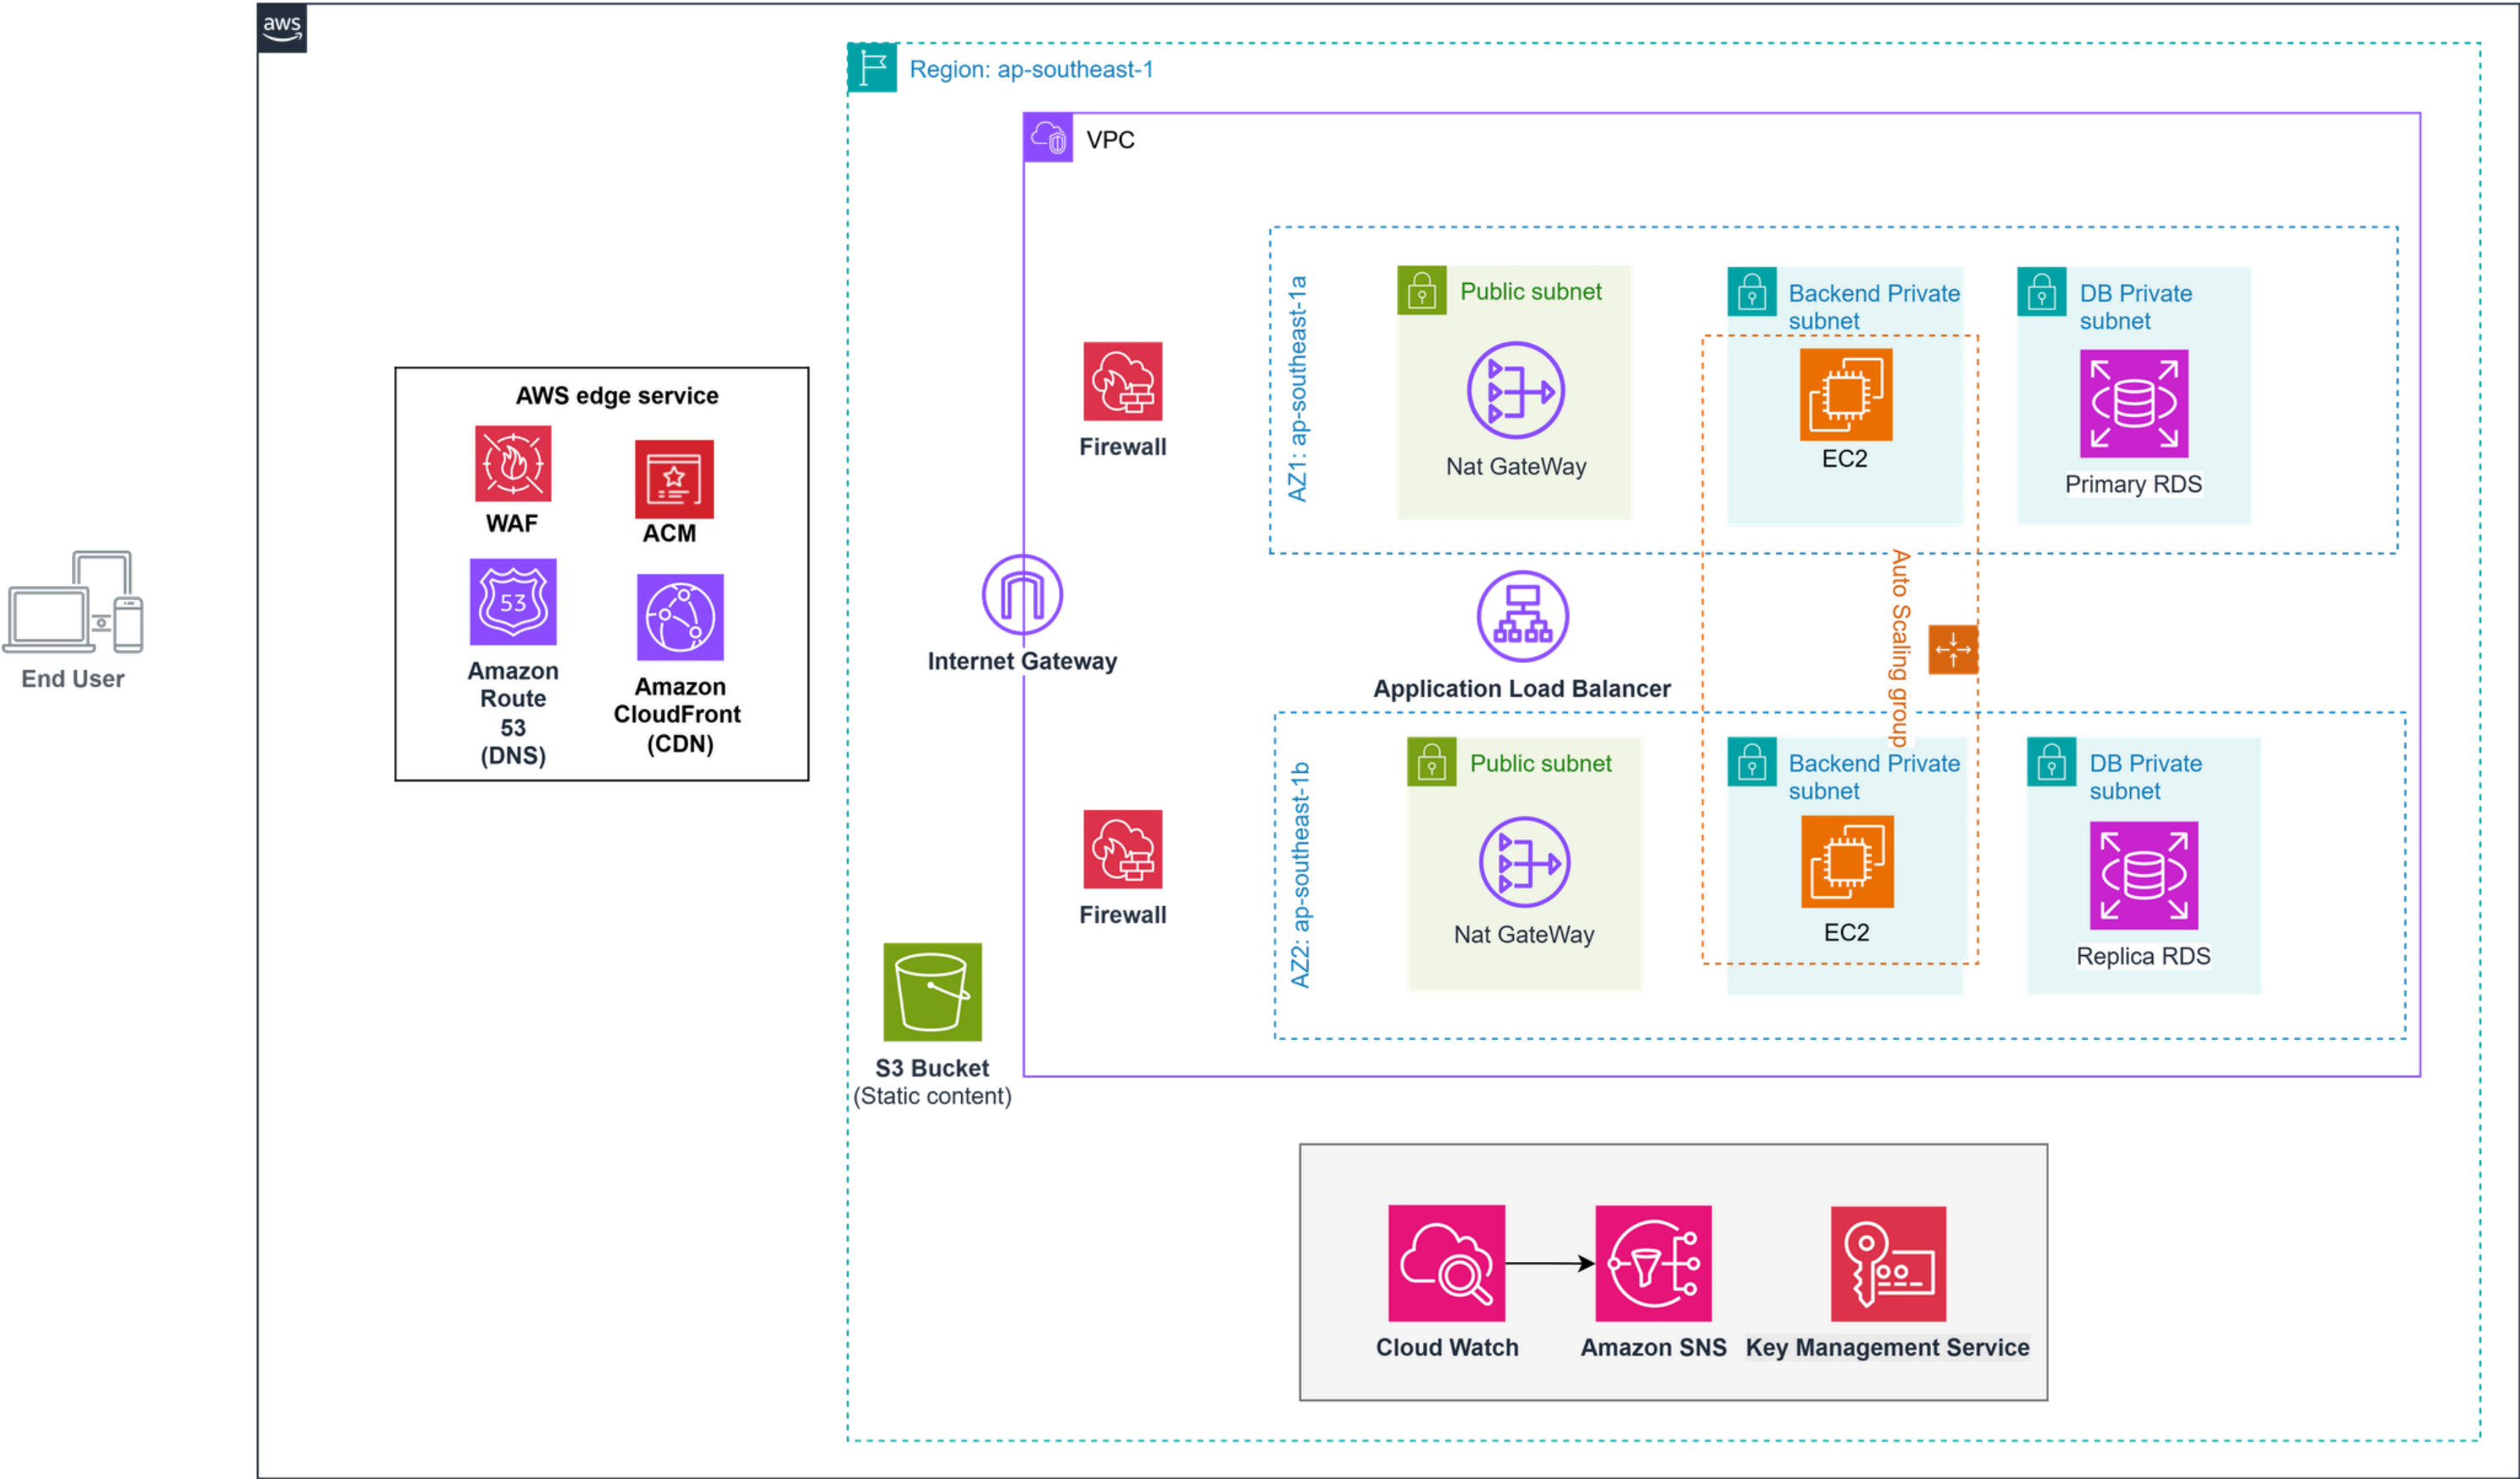

## Why Choose Cloud (AWS)?

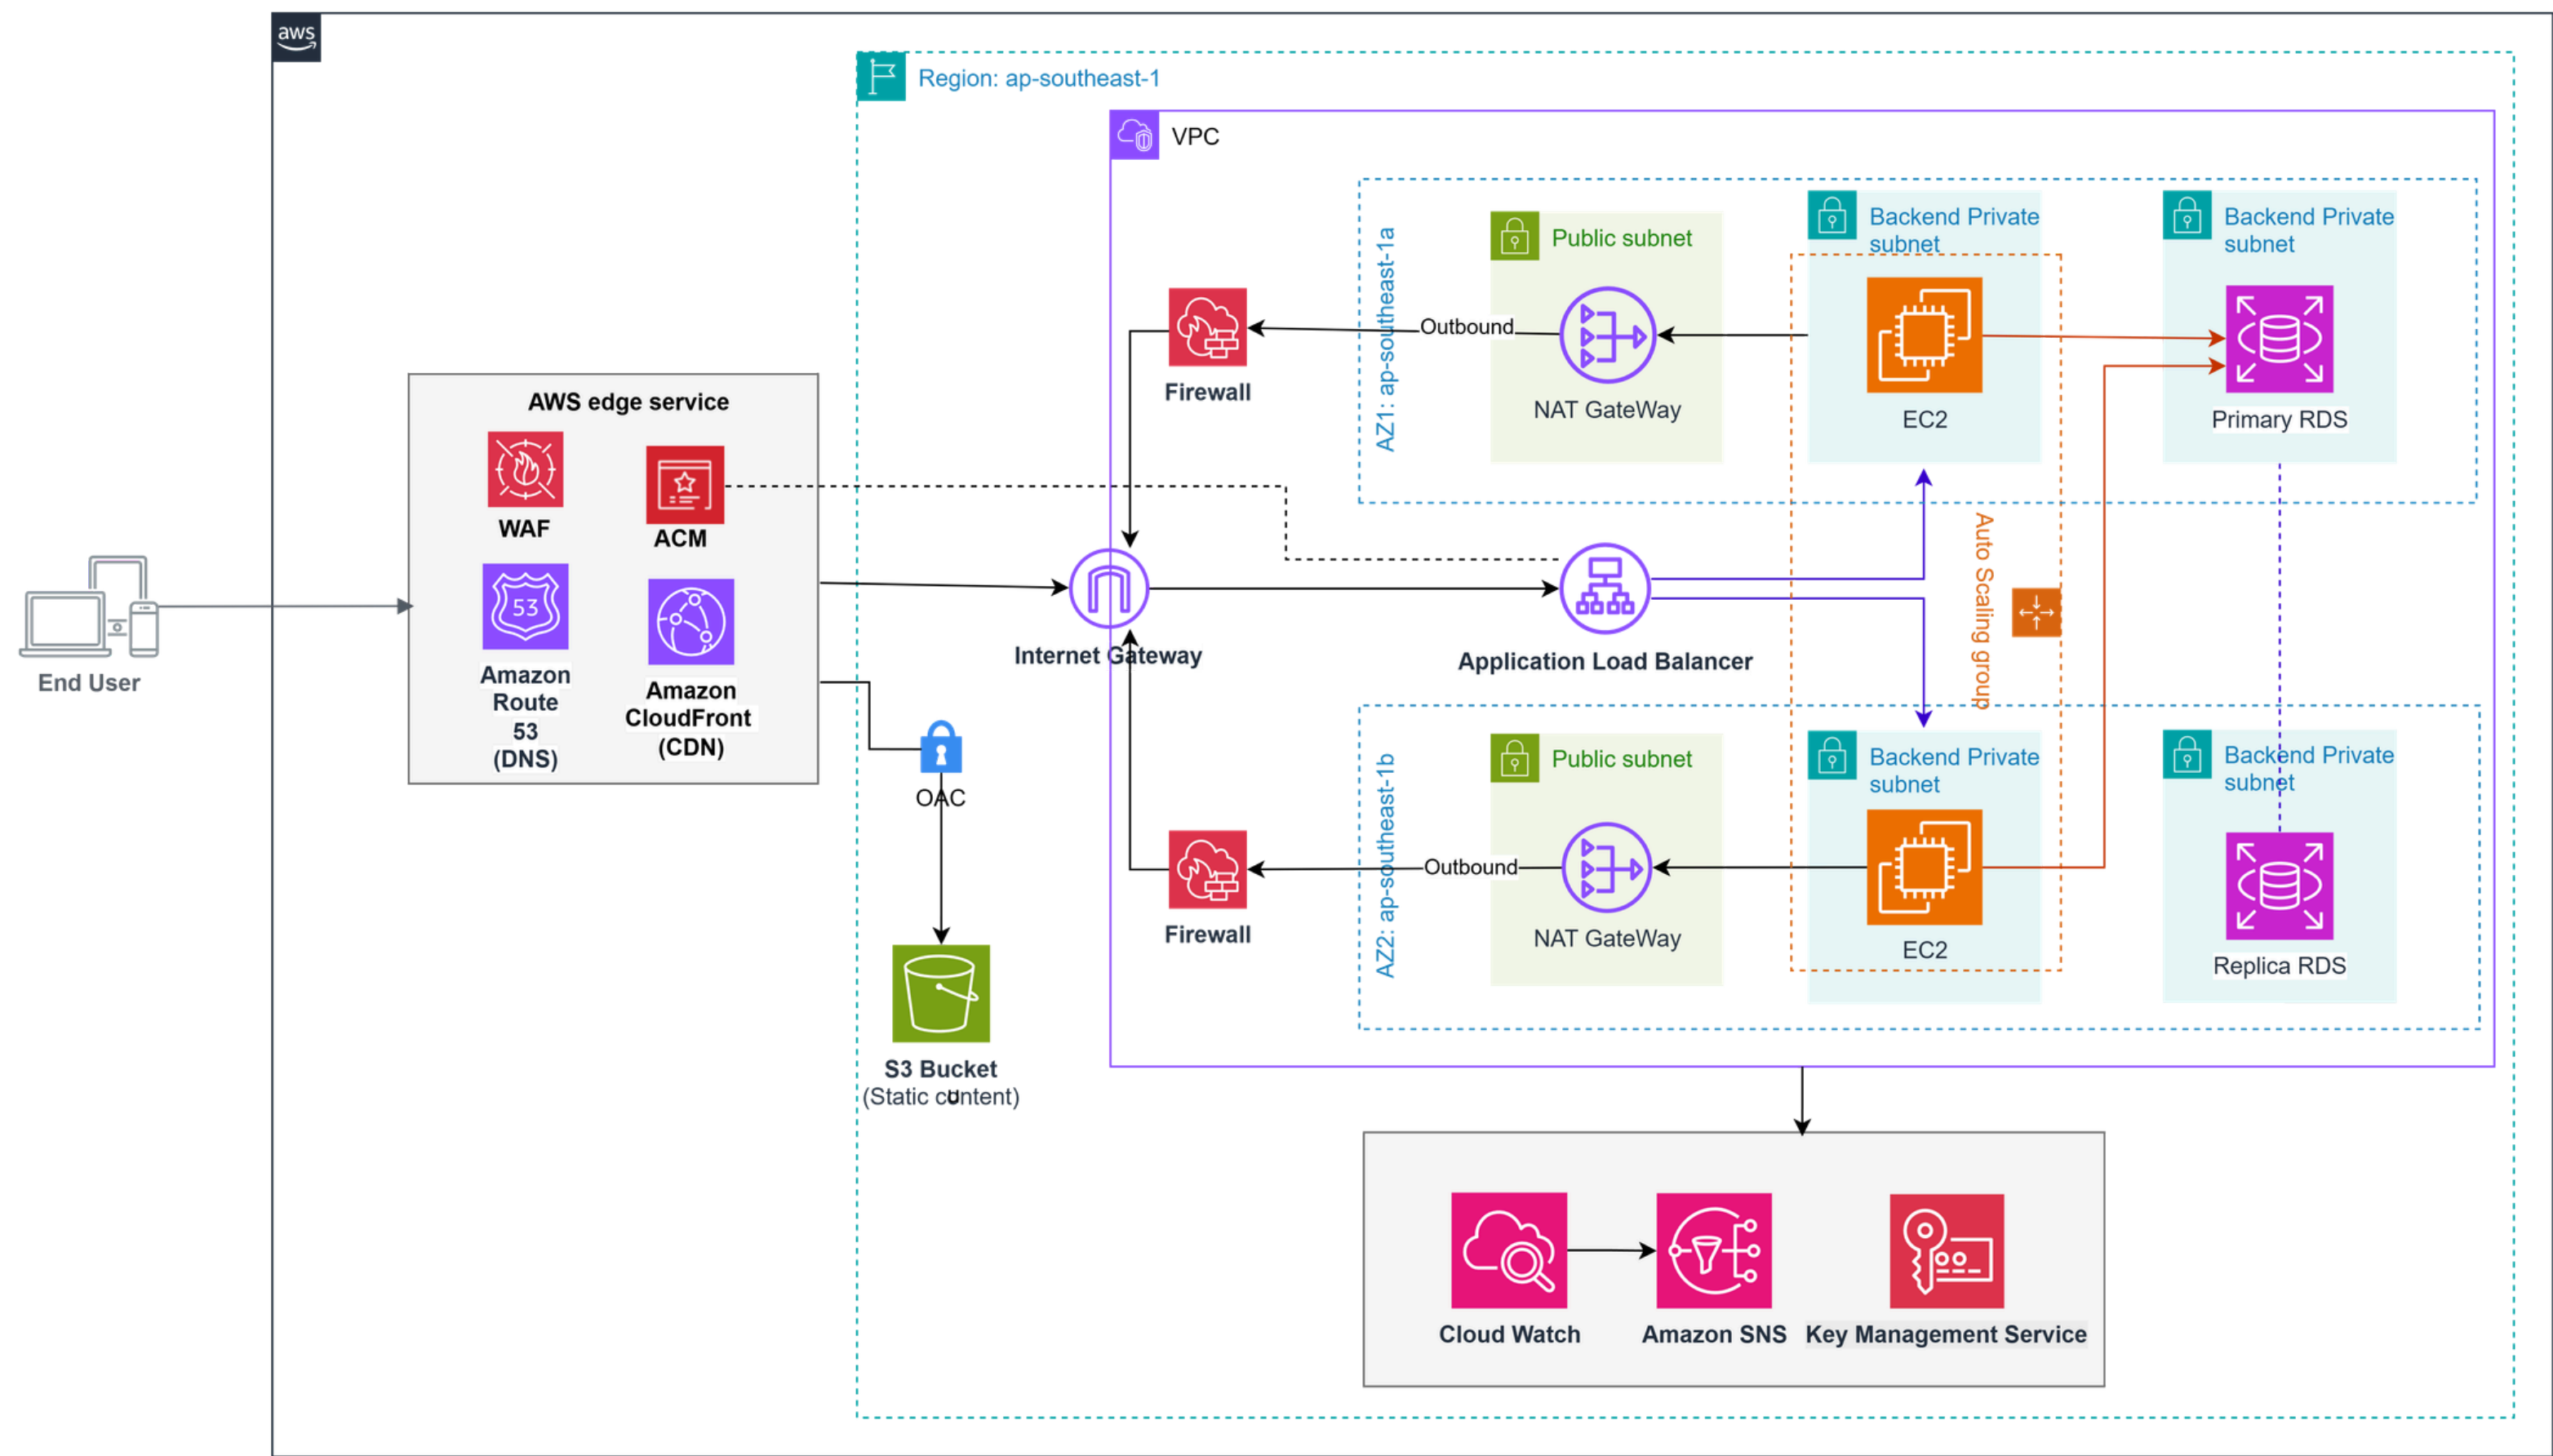

- **High Availability:** Ensures 24/7 uptime by leveraging Multi-AZ (Availability Zone) infrastructure to prevent single points of failure.
- **Cost-Efficiency:** Optimized spending with a Pay-as-you-go pricing model, allowing you to pay only for the resources actually consumed.
